Basics of Neo4j - GDS Library
Professional Skills for Academic Success

Daxil Vala

Backend Software Engineer & AI Engineer | Python, TypeScript, Go, AWS, Kafka | LLM Agents, RAG, LangChain | Founding Engineer at 2 Startups | MS @ Northeastern, Dec 2026
Boston, Massachusetts, United States

Summary

I'm a backend and AI software engineer with 4+ years building distributed systems in Python, TypeScript and Go, and more recently LLM agents and RAG pipelines running in production on AWS.I started as a founding engineer at Elocity, an EV charging startup. I built core microservices, a Kafka-driven load distribution service, and Elasticsearch analytics that cut dashboard load times by 65%. After that I moved to fintech at Open Financial Technologies, where I helped break a monolith into microservices and built a Go loan service for ICICI Bank. Then I joined Apollo.io, worked on the Deals product, and ran large MongoDB migrations with zero data loss.Most recently I was a founding engineer at Medlaunch, a healthcare AI startup. We shipped an MVP in two weeks, and I built CLARA, an internal AI agent on AWS Bedrock and LangChain that answers hospital policy questions using RAG.I like the early stage of a product: picking the stack, owning a service end to end, and fixing what breaks in production. I'm finishing my MS at Northeastern in December 2026 and I'm looking for full-time Software Engineer and AI Engineer roles starting January 2027.Stack: Python, TypeScript, Go, Java, Node.js/NestJS, Flask, Ruby on Rails, PostgreSQL, MongoDB, Elasticsearch, Redis, Kafka, RabbitMQ, AWS (ECS, Lambda, Bedrock), Docker, Kubernetes, LangChain, LangGraph, RAG, MCP.Email: daxil.work99@gmail.com

Experience

Residential Security Office at Northeastern University

RSO Proctor
March 2026 - Present (9 months)
Boston, Massachusetts, United States

Graduate Student Government, Northeastern University

1 year 4 months

Tech Senator
July 2026 - November 2026 (5 months)
Boston, Massachusetts, United States

At Graduate Student Government, I worked on enhancing the digital experience for graduate students. I maintained the GSG WordPress website, developed event registration workflows, and automated routine updates, which streamlined processes for the executive board. My collaboration with the Technology Committee on a site revamp further improved our online presence and engagement.

P&O Senator
August 2025 - July 2026 (1 year)
Boston, Massachusetts, United States

In my role at Graduate Student Government, I actively represented graduate student interests within university governance and played a key role in planning major events. I successfully organized the Fall Brunch, which attracted over 800 attendees, while collaborating with various teams to boost student engagement and community spirit. My efforts contributed to a more inclusive and vibrant campus environment.

Medlaunch Concepts
Software Engineer Co-op
May 2025 - December 2025 (8 months)
Clearwater, Florida, United States

• Co-led tech stack decisions from day one and shipped a production-ready MVP in 2 weeks with a 3-person backend team (NestJS, TypeScript, MongoDB)
• Built CLARA, an internal AI agent on AWS Bedrock and LangChain that answers hospital policy questions in real time using RAG across 13+ data sources
• Cut hospital policy document generation from hours to under 10 seconds by building a service that aggregates structured data across entities and maps it to Medlaunch's standards database
• Removed manual document intake by building serverless AWS Lambda pipelines that parse unstructured policy documents and extract structured data
• Consolidated 15 certification types into a single MongoDB collection by designing a polymorphic schema, reducing schema duplication and simplifying reporting
• Set up Docker and AWS ECS deployments with CI/CD for horizontal scaling, and mentored 3 junior engineers as the team grew

Apollo.io

Backend Engineer

May 2023 - August 2024 (1 year 4 months)

Bengaluru, Karnataka, India

At Apollo.io, within my role as a Backend Engineer, focusing on optimizing data management and enhancing user engagement. I successfully executed migration scripts for a production MongoDB cluster, completing the task ahead of schedule. Additionally, I built a deal management system that streamlined lead handling for SMEs, while leading cross-team efforts to improve user interactions in the deal workflow.

Open Financial Technologies

Software Engineer

September 2022 - May 2023 (9 months)

Bengaluru, Karnataka, India

At Open Financial Technologies, I played a pivotal role in modernizing our software infrastructure. I successfully migrated a legacy PHP monolith to NestJS and TypeScript microservices, which significantly improved scalability. Additionally, I developed a Loan Integration Service in Go for ICICI Bank, serving a large customer base. My contributions also included optimizing API response times and mentoring new interns.

Elocity

Founding Software Engineer

June 2021 - September 2022 (1 year 4 months)

Bangalore Urban, Karnataka, India

As a Founding Software Engineer at Elocity, I played a pivotal role in developing an innovative EV charging management platform. I built core microservices and optimized performance, achieving significant improvements in load times and charging throughput. My contributions included implementing real-time load distribution strategies and enhancing the platform's scalability through multi-tenancy and white-labeling, which rapidly grew our customer base.

3EA

Associate Analyst

November 2020 - December 2020 (2 months)

Mumbai, Maharashtra, India

In my role as an Associate Analyst at 3EA, I focused on developing growth strategies in collaboration with international clients to drive business

expansion. I collected and analyzed data to deliver actionable insights that informed strategic decision-making. Additionally, I partnered with cross-functional teams to enhance operational efficiency and implemented innovative solutions to improve workflows.

Education

Northeastern University

Master of Science - MS, Computer and Information Sciences, General · (August 2024 - December 2026)

National Institute of Technology Karnataka

Bachelor of Technology, Electrical and Electronics Engineering · (2017 - 2021)
